

Home Station, Vacation Station, RV, or Emergency and Survival

NEW! 33 Foot Telescoping Fiberglass Mast

Collapses to 3.8' 3.3 pounds

Just pull out each section, and twist to lock. It takes about 15 seconds. The bottom section is 1 3/4" in diameter. Great for portable and temporary use - RV, travel, hamfests, field day, DX'peditions. They are perfect for use in emergency application, both land based and marine.

It's perfect for all emergency and portable applications. It will support lightweight inverted-V and wire loop antennas. It is not suitable for use as end supports for dipoles and such.

Super strong fiberglass flexes to resist breaking. Black color resists UV effects. One year warranty.

I am currently working on several antennas which will use these masts. If you don't have any space or want to hide an antenna, this mast can do the job.

I use one of these masts on my RV. Combined with a LDG automatic tuner, I can put up a truly effective vertical in just minutes, once on site.

Note: At full height, the mast will support only a limited weight. If the antenna is too heavy, simply don't use the topmost sections. The height will be reduced by a few feet, but your antenna will be in the air, and it will be effective.

Here is a hint - Are you in a situation where a tall mast is not allowed? It only takes 15 seconds to pull out the sections and lock in place. When you're done, just drop your antenna. It only takes another 15 seconds. It can't get easier than this.

Stay tuned for future developments of special, all band, antennas from The RADIO WORKS.

Only \$75

EZ-Hang

EZ-Hang Deluxe Kit Includes

EZ-Hang
Spare bands
EZ-Winder
7 Weights and clips

\$98

EZ-Hang is a specially selected spinning reel combined with a hunting slingshot and the proper weights and line to make your next antenna installation a snap.

The slingshot is a quality unit and uses the highest quality tubular thrust bands and has a padded wrist support for extra comfort. The extra bright yellow weights make it easy to see in the trees.

The "Intermediate Line Dispenser" features 500-feet of #18 Nylon line with 155-pound break strength. The line color is an easy to see orange color.

If you've read my suggestions for installing wire antennas, you've seen my three-line method. The EZ-Hang supports my recommended system. The first line is the light fishing line off the spinning reel. The "Intermediate Line Dispenser" is the second line and is pulled into the tree with the lightweight line from the slingshot. The final line is our Mil Spec line or our Double Dacron™ antenna rope as the final support rope pulled up by the second line. This is the easy way to get your antenna into the air.

Extra weights are available at \$7 for a pack of 5.

Intermediate Line Dispenser with 500' of orange colored line. \$15.95

If you are going to be of any help in an emergency, you MUST have a good signal. With all the excellent little mobile and QRP rigs that many of us have, we can be an important part of an emergency operation. But, if we don't have an effective signal on the air, we will do no more than just listen. We have the antennas you need. And, we are designing many new models that we will release as quickly as possible. **Be a part of the solution, not part of the problem.**

Mobile Whips

Low cost, high quality mobile whips are available from the RADIO WORKS. **from \$18.95**

Prices and specifications are subject to change without notice.

There is simply nothing better than the CAROLINA WINDOM LP series. Easy to store and put up.

Metz-Ground independent 1/2 wavelength vertical.

\$45.95

\$60

MicroDipole™ uses 2 mobile whips and our special balun and DAK mount

\$15

DAK Mount

from \$55

There are many MicroDipole™ like antennas on the market. Our package puts it all together with the correct mount where both whips are isolated from ground. This produces maximum performance.

InTreeVert™ - Select a home installation or an emergency, there is no easier way to get a big 2m or 440 signal on the air than to install our InTreeVert™. You can have one high in a tree or on our 33' pole and be on the air in just minutes. You'll have a signal that will be heard even if the repeaters go down. I

All of these systems and much more will be on our web site soon.
